

✖ Just read on [photo-pro Ken Rockwell's blog](#) a post about the last **Space Shuttle Discovery** flight.

Photo amateurs and pro-am astronomers around the world managed to spot Discovery's flybys ([check here for more info](#)) and shot great pictures.

Several pictures included a trace that most observers were unable to understand... until *a NASA spokeswoman later cleared the mystery by identifying the light as 150 pounds of astronaut urine and wastewater.*

Besides the human factor even in outer space, it's thrilling to see how many geeks out there are so keen on catching everything in the sky!
